

Installation instructions Pole Adapters

Tools needed: - NONE – just your hands!

Read through all instructions before starting and loosen the Deckhands™ clamps knobs before inserting adapters.

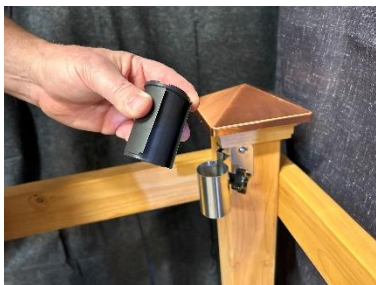

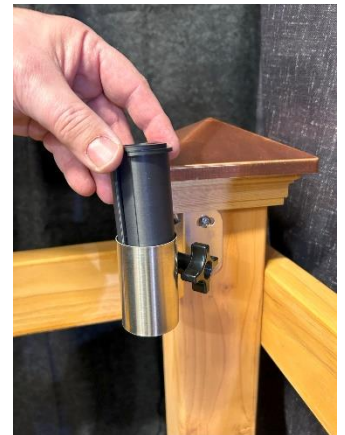

These adapters can reduce the Deckhands™ clamp size to either 1.25, 1.0, or .75 inch for holding poles for accessories. Includes 2 shim sizes per clamp for any needed adjustments for some metric sizes.

Insert all 3, 2 outer or 1 outer pole adapters inside your Deckhands™ clamp as needed for your pole. Be sure the flange openings are staggered and not all lined up. The outer adapter opening must NOT line up with the clamp opening.

You *may* need to install the adapters to your pole one at a time before inserting into your clamp if the fit is tight.

If you need just a slight amount smaller then wrap around the thin or thick flat shim to make your pole fit snug and safely. Center the shim around the outer adapter opening.

If using a shim we recommend holding all flanges and shim together in your hand and then tilting slightly as you insert the (open end of the shim first) adapters into your Deckhands™ clamp before pressing the entire adapter set into the clamp.

You will get 4 shims and 6 adapters to use with a pair of Deckhands™ clamps.

Be sure to tighten the knob when you have inserted adapters and the pole.
